

# Improve your ability to engage your patients.

Successful patient engagement enables patients to stay involved in their care as both a patient and a consumer, leading to desired patient behavior and healthy patient outcomes.

## PatientPortal enables you to:

- Connect multiple disparate EHRs to a single patient Portal
- iOS and Android Mobile Apps
- Telehealth and remote visits
- Branded to your organization's preference
- Patients can self-schedule their appointments
- Provider search across your enterprise
- Begin patient intake prior to appointment
- Automate delivery of electronic forms
- 2015 MU3 Certified – Satisfies MIPS

# Features:

## Enhanced Patient Engagement

Portals are only valuable tools if patients utilize them, which is why IntelliChart designed a patient-centric experience for the PatientPortal. Patients can access live scheduling, which makes it easier for patients to see their providers on their time. Patients can also see lab results, view and refill medications, and send secure messages anytime instead of having to call during office hours. As a result of this rich feature set that patients want, adoption of the PatientPortal is higher than industry averages.

## Aggregated Patient Data

Data is collected from multiple acute and ambulatory information sources, and then standardized into one registry. This aggregated clinical data registry enables patients to see all of their data in one view.

## API Platform for Easy Integration

HealthyOutcomes' robust API platform integrates seamlessly with acute and ambulatory EHRs, as well as HIE solutions and payer systems.

## MIPS/2015 MU3 Certified

PatientPortal is 2015 MU3 Certified by the Office of the National Coordinator for Health Information Technology. Using the PatientPortal enables your organization to fulfill Meaningful Use and MIPS ACI requirements to become eligible for Medicare and Medicaid EHR Incentive Payments.
